A 55-year-old man presents with a 5-month history of persistent coughing and dyspnea. He reports that his cough and dyspnea have worsened in months, and his voice has become increasingly hoarse. The patient has a 50-pack-year history of smoking. Physical exam reveals that when the patient's arms are extended for an extended period of time, he develops facial plethora. A dexamethasone suppression test is negative. The patient is most at risk for following?

☐ A. Hypocalcemia
☐ B. Hypokalemia
☐ C. Hypomagnesemia
☐ D. Hyponatremia
☐ E. Hypophosphatemia
